iperf3KMP 1.0.2: sanity tests

Desktop and mobile · single 1.0.2 release · `themes-1.0.1.1` at `21b396b` · written 2026-11-04

Packages: `~/iperf3kmp-builds/20261104-150428/` (see that folder's README). Use the same network and server (`gb10`, port 5201) everywhere, so throughput numbers can be compared. Tick one box per package or device.

Part 1: desktop (the same tests on every package)

Column	Package	Test machine	File
mac	macOS arm64	Mac	`iperf3KMP-1.0.2.dmg`
deb arm	Linux aarch64 .deb	Debian 13 VM	`iperf3kmp_1.0.2_arm64.deb`
rpm arm	Linux aarch64 .rpm	Fedora 44 VM	`iperf3kmp-1.0.2-1.aarch64.rpm`
deb x64	Linux x86_64 .deb	Debian/Ubuntu x86_64	`iperf3kmp_1.0.2_amd64.deb`
rpm x64	Linux x86_64 .rpm	Fedora/RHEL x86_64	`iperf3kmp-1.0.2-1.x86_64.rpm`
msi x64	Windows x64	proart1 / clean x64 PC	`msi-x64/iperf3KMP-1.0.2.msi`
msi arm	Windows ARM64	yoga1 / Windows ARM64	`msi-arm64/iperf3KMP-1.0.2.msi`

CLI path after install: macOS `/Applications/iperf3KMP.app/Contents/MacOS/iperf3KMP`; Linux `/opt/iperf3kmp/bin/iperf3KMP`; Windows `iperf3KMP.exe` in the per-user install folder under `%LOCALAPPDATA%`. Any argument runs the CLI; none opens the GUI. Exit code: `echo $?` (macOS/Linux) or `$LASTEXITCODE` (PowerShell).

A. Install and uninstall

#	Test	Pass when	mac	deb arm	rpm arm	deb x64	rpm x64	msi x64	msi arm
A1	Install the way a user would: `.dmg` → Applications; `sudo apt install ./….deb`; `sudo dnf install ./….rpm`; double-click the `.msi`	Installs without errors, over 1.0.1 where present	☐	☐	☐	☐	☐	☐	☐
A2	Launcher	App icon present: Dock / Launchpad, Linux app menu, Windows Start menu. Starts with the iperf3KMP icon, not the Java icon	☐	☐	☐	☐	☐	☐	☐
A3	Uninstall: drag to Trash; `sudo apt remove iperf3kmp`; `sudo dnf remove iperf3kmp`; Windows Apps & features	Removes cleanly, menu entry gone (on Debian, re-check the earlier `prerm` regression)	☐	☐	☐	☐	☐	☐	☐

B. GUI

#	Test	Pass when	mac	deb arm	rpm arm	deb x64	rpm x64	msi x64	msi arm
B1	Version	Shows **1.0.2**	☐	☐	☐	☐	☐	☐	☐
B2	Download test to `gb10`	Live progress, then a summary with Average, Max, Min, Median and Samples	☐	☐	☐	☐	☐	☐	☐
B3	Upload test, 8 streams	Upload styling; the stream count matches	☐	☐	☐	☐	☐	☐	☐
B4	Stop mid-test, then run again	Stops cleanly; the next run works	☐	☐	☐	☐	☐	☐	☐
B5	Unreachable host; bad port	Clear error each time; the app stays usable	☐	☐	☐	☐	☐	☐	☐
B6	History: save, open, expand, delete, Export CSV	Numbers match the main screen; the CSV is written. **Windows ARM64: History is disabled by design** (no SQLite native library), so check it fails gracefully	☐	☐	☐	☐	☐	☐	☐
B7	Light and dark system theme	Main, running and **History** screens follow the theme; History cards dark and readable in dark mode; fonts consistent	☐	☐	☐	☐	☐	☐	☐
B8	Resize the window small and large	The layout adapts (compact top bar when small); nothing clipped. On Windows, no console window appears when started from the Start menu	☐	☐	☐	☐	☐	☐	☐

C. CLI

#	Test	Pass when	mac	deb arm	rpm arm	deb x64	rpm x64	msi x64	msi arm
C1	`iperf3KMP -V` / `--version`	Prints 1.0.2	☐	☐	☐	☐	☐	☐	☐
C2	`iperf3KMP -h`	Help text; exit code 0	☐	☐	☐	☐	☐	☐	☐
C3	`iperf3KMP -c gb10 -t 10 -P 8 -O 2 -R` (download)	Per-interval lines, then a summary; exit code 0	☐	☐	☐	☐	☐	☐	☐
C4	`iperf3KMP -c gb10 -t 10` (upload is the default)	Upload summary; exit code 0	☐	☐	☐	☐	☐	☐	☐
C5	`iperf3KMP -c gb10 -t 5 -l 3` (loop 3 times)	Three runs, each with a summary	☐	☐	☐	☐	☐	☐	☐
C6	`iperf3KMP -c no-such-host`; `iperf3KMP -c gb10 -p 1`	Clear error; **non-zero** exit code	☐	☐	☐	☐	☐	☐	☐
C7	Ctrl-C during C3	Stops promptly; the terminal is left in a normal state	☐	☐	☐	☐	☐	☐	☐
C8	Output redirected: `iperf3KMP -c gb10 -t 5 > out.txt`	The file contains clean text, without escape codes	☐	☐	☐	☐	☐	☐	☐

Part 2: mobile (real devices)

Devices: **iPhone 17 Pro**, **iPad M4**, **moto g stylus 2025** (Android, arm64). Install the release candidate the way testers will get it: TestFlight on iOS, Play internal testing on Android. On iOS, run `./gradlew syncVersions` before archiving.

Core tests: every device

#	Test	Pass when	iPhone	iPad	moto
M1	Install and version	Installs over 1.0.1 and starts; shows version **1.0.2**	☐	☐	☐
M2	Download test to `gb10` (port 5201, defaults)	Live progress, then a summary with Average, Max, Min, Median and Samples	☐	☐	☐
M3	Upload test, 8 streams	Upload styling; the stream count matches	☐	☐	☐
M4	Stop mid-test	Stops cleanly; a new run works right after	☐	☐	☐
M5	Unreachable host; bad port	Clear error each time; the app stays usable	☐	☐	☐
M6	History: save, open, expand, delete, Export/Share CSV	Numbers match the main screen; delete works; the CSV is produced	☐	☐	☐
M7	Light and dark mode: main, running and **History** screens	History cards dark and readable in dark mode, unchanged in light mode; fonts consistent	☐	☐	☐

iPhone 17 Pro

Test	Pass when	✓
Local Network permission (fresh install, first LAN test)	Asks for access; allowing it lets the test run; denying it gives an understandable error. Reset under Settings → Privacy → Local Network	☐
Larger Dynamic Type (Settings → Display → Text Size)	Result rows don't clip with the new font sizes	☐
Cellular only (Wi-Fi off), server `jabramson.com`	The test completes over cellular	☐
Background mid-test, then return	Keeps running or stops cleanly; behaves the same each time; no crash	☐

iPad M4

Test	Pass when	✓
Rotate portrait ↔ landscape, during a test and on History	The layout reflows; nothing overlaps; top-bar buttons stay reachable	☐
Split View / Stage Manager, narrow window	Compact layout (smaller top bar and buttons); input fields stay usable	☐
Hardware keyboard (if available)	Typing into the server and number fields works; Tab and Return behave sensibly	☐

moto g stylus 2025 (Android)

Test	Pass when	✓
Edge-to-edge display (`targetSdk 37`), both themes	Top and bottom bars aren't under the status bar, the navigation bar or the camera cutout	☐
System back gesture from History	Returns to the main screen; the last result is kept	☐
Export CSV via the share sheet (e.g. Gmail, Drive)	The file actually attaches in the receiving app (FileProvider)	☐
Rotate, or change the theme, during a running test	The test and its results survive	☐
Stylus handwriting into the server field	The text is entered correctly	☐

Use the moto (or another Play-certified phone) for the Play internal-testing install. The MuMu emulator isn't certified and can't install from Play.
